

# Animal Inquiry: Animal Facts

BOA CONSTRICTORS by Steward

Boa Constrictor

What the animal looks like:

Depending on the habitat they are trying to blend into, their bodies can be tan, green, red, or yellow, and display cryptic patterns of jagged lines and ovals.

How the animal moves:

Boas use a special set of scales to propel themselves forward, they also move their mouths & exhibit a specific type of squeezing movement to subdue their prey

How the animal eats:

They eat mice, birds, frogs and lizards. A fully grown one will eat monkeys, wild pigs and other animals.
